

Initial D Arcade Stage 8 Infinity BGM Modding Guide

This guide is dedicated to the semi-automated workflow for Initial D Arcade Stage 8 Infinity to mod BGM (in game musics).

Modding Folder structure

- `./initial_d_arcade_stage_8_infinity_bgm_modder.cmd`
- `./backup/`
- `./mod-output/`
- `./new-musics/`
- `./new-musics-previews/`
- `./tmp/new-wav/`
- `./tmp/new-wav-prev/`
- `./tmp/wav-adpcm/`
- `./tmp/wav-pcm/`
- `./tmp/xact-project/`
- `./tools/d8-song-title-loader/`
- `./tools/ffmpeg/`
- `./tools/unxwb/`
- `./tools/xact/`

What the Script Automates

1. Game folder definition and saving for future runs
2. Backup of data/SOUNDS/IniD8.xsb and IniD8.xwb
3. WAV (ADPCM) extraction using unxwb
4. Conversion to WAV (PCM) using ffmpeg
5. 50s previews generation (unless provided)
6. Manual integration with XACT of the new WAV songs & previews
7. Automatic packaging into mod-output/
8. Generation of songs.ini from new-musics filenames
9. Integration of winmm.dll for custom song titles

1- Preparing Your Songs

Put your original music files inside the "new-musics" folder.

Naming format:

01 Artist - Song Title.mp3
02 Artist - Another Song.flac

The script parses these filenames to automatically generate songs.ini.

2- Preparing your Songs Previews

Put your original music preview files inside the "new-musics-previews" folder.

If you leave the folder empty, the script will automatically generate 50 seconds preview files in /tmp/new-wav-prev.

3- Running the Script

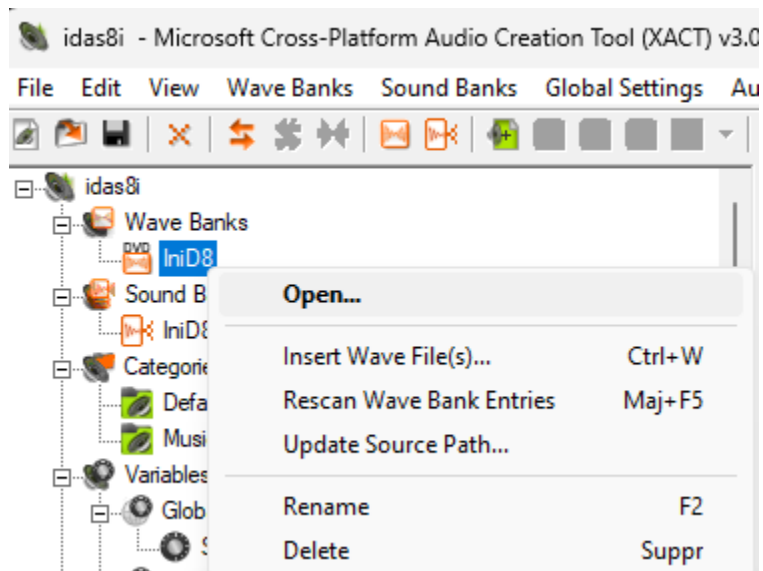

1. Run **initial_d_arcade_stage_8_infinity_bgm_modder.cmd**
2. The first run will backup the modified game files and extract from them 11.302 files. Get ready to spend 30min+ on these steps. You will be able to skip it in following runs.
3. You will be asked to do some manual work in XACT tool to integrate the preprocesses files in the game.

4- XACT Workflow

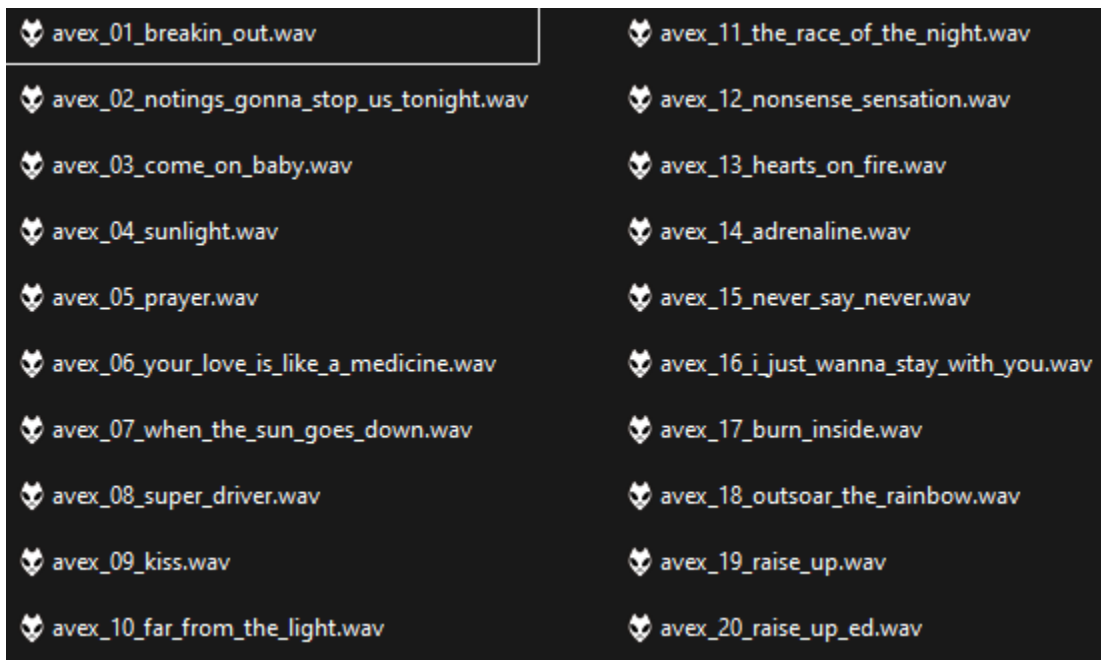

The script automatically launches: tools/xact/Xact3.exe
with: tmp/xact-project/idas8i.xap

Inside XACT:

1. Right-Click on Wave Banks/IniD8 and do Open

2. Drag and drop in IniDD8 (Wave Bank) window's list of files your tmp/new-wav files. Don't worry if they have the same names as original songs files, it's required for song replacement to work but these are your musics:

Do the same with previews from : tmp/new-wav-prev:

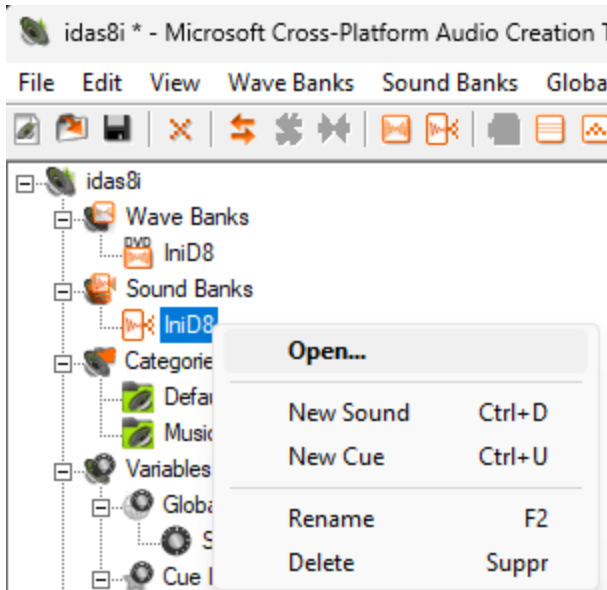

If you scroll down at this point you should see this :

The screenshot displays the Microsoft Cross-Platform Audio Creation Tool (XACT) v3.0 (Windows) interface. The main window shows the 'IniD8 (Wave Bank)' with a list of audio assets. The left sidebar shows the project structure, including 'Wave Banks', 'Sound Banks', 'Categories', 'Variables', 'RPC Presets', 'DSP Effect Path Presets', 'Compression Presets', and 'Session Windows'. The bottom-left panel shows the 'General' settings for the 'IniD8' wave bank, including its name, notes, type (Streaming), size (1.43 GB), and checkboxes for 'Friendly Names' and 'Sync In-Game Data'.

select_avex_19_raise_up	8820000	ADPCM	100	3031864

11302 Waves (39 unused)

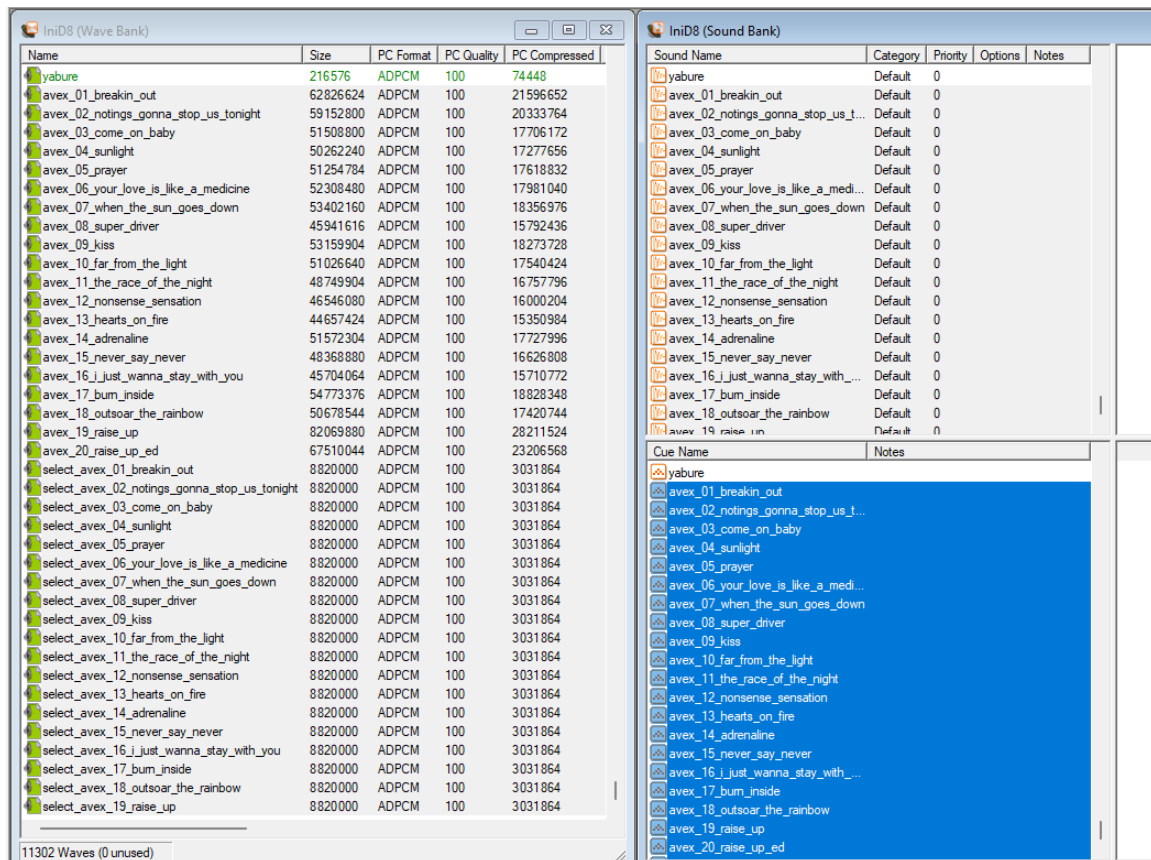

3. Right-Click on Sound Banks/IniD8 and do Open

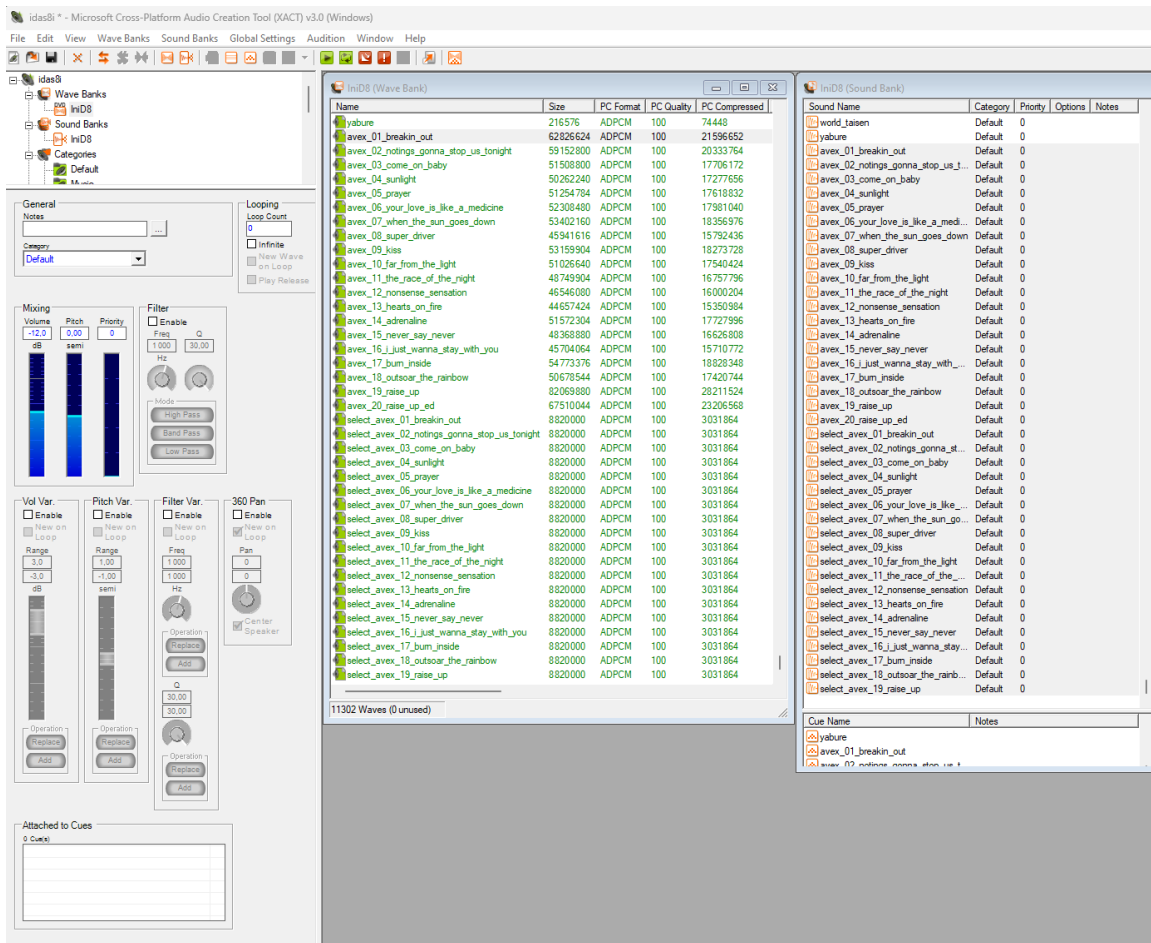

4. Put the window side by side with IniD8 (Wave Bank) :

And select all the newly imported musics (the red files) and drag and drop them on the IniD8 (Sound Bank) lower left part of the window (in the CUE Name) column. It will include the new songs in both Sound Name column and Cue Name column:

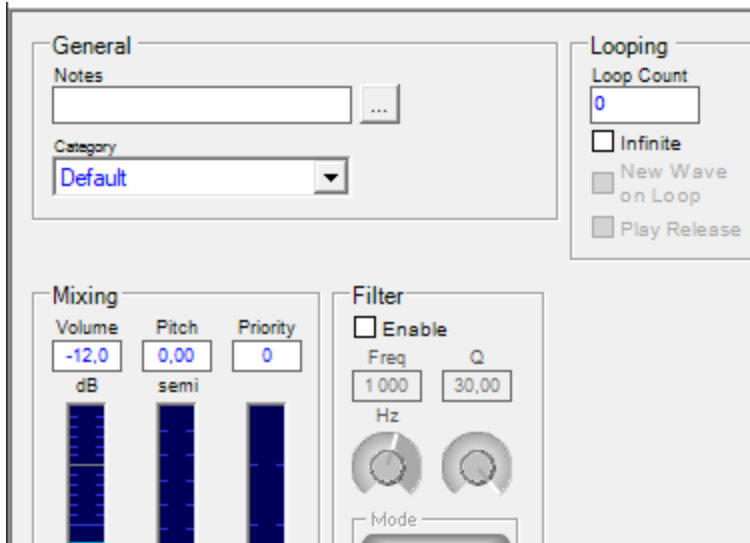

5. Select in Sound Name column the new files (using SHIFT if multiple at once) : avex_* and select_avex_* :

Then in bottom left area, change Mixing volume, from -12,0dB to anything between -6dB to +1dB to raise the musics volume in game. You might need to make multiple tries or adjust track by track if they come from various quality sources.

Use the opportunity to set an automatic track loop. Usually for avev_* musics ranging from 3min to 6min you can set it to 1. Below 3min to infinite. For select_* the goal is for the music to be 30s to 50s long max. Most of the time you can leave it to 0. But adjust upon your needs.

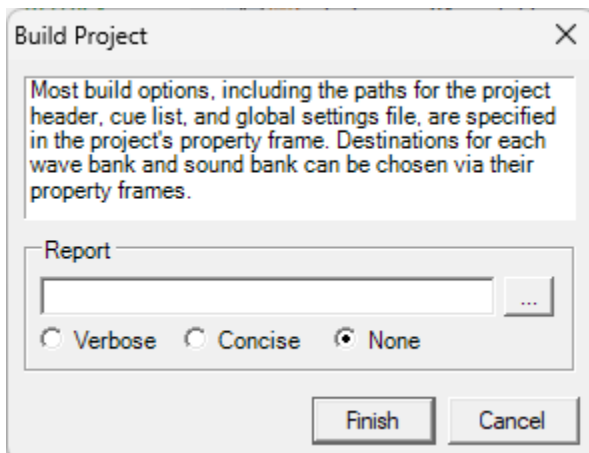

6. File / Save Project (CTRL+S)

7. Build the xsb and xwb files using the last button on the ribbon:

Leave empty and None and click on Finish :

Wait until completion, close XACT.

5- Final Output

Resuming the script execution.

The final mod package is automatically created inside: mod-output/

Including:

- data/SOUND/IniD8.xsb
- data/SOUND/IniD8.xwb
- songs.ini
- winmm.dll

The files will also be copied on top of your game files to apply the patch.

You can play.

Enjoy

Annex – Base game songs list

- 01 ace - breakin out
- 02 annalise - nothing's gonna stop us tonight
- 03 fastway - come on baby
- 04 kaioh - sunlight
- 05 ducky chix - prayer
- 06 mega nrg man - your love is like a medicine
- 07 ken blast - when the sun goes down
- 08 daniel - super driver
- 09 bamboo bimbo - kiss
- 10 leo river - far from the light
- 11 dave rodgers - the race of the night
- 12 paul harris - nonsense sensation
- 13 david dima - hearts on fire
- 14 ace - adrenaline
- 15 manuel - never say never
- 16 dream fighters - i just wanna stay with you
- 17 takenobu&kunoichi@sega - burn inside
- 18 m.o.v.e - outsoar the rainbow
- 19 m.o.v.e - raise up.
- 20 m.o.v.e - raise up ed
